

Kickoff - lecture 7

Peter Ganong and Maggie Shi

PS1 and PS 2 grading

- Some students received 50% because our grading script looked for **ps1.pdf** but missed other PDF names. You should have received an email about a corrected grade.
- We are moving to an AI-assisted process for grading for completion:
 - 2 possible grades: 50% or 100%
 - AI takes first pass and produces list of possible 50%'s
 - Human TA goes through list and verifies
 - I.e., we are correcting type 1 errors (false positive) only

PS2 grading, cont'd

- AI script scans PDF: **it is crucial to submit a PDF**
- If you wrote code to display graph but it didn't render in PDF, that is considered “complete”
 - We've collected and updated possible solutions [here](#)
 - Shoutout: Jianghan Yuan for [clever solution](#)
 - If the solutions don't work for you, please come to OH or post on [Ed thread](#)

Lab assessment feedback

- Students (and TAs) are reporting that feedback format in Canvas is sub-optimal.
- We are working on alternatives like incorporating Gradescope to improve the quality of feedback

Midcourse survey update

- Harris survey - sent out last week
- Our own survey - released today, *complete in lab*
- Both anonymous!
